# Build and ship software with tools crafted for productivity

Laravel provides a complete ecosystem for web artisans. Our open source PHP framework, products, packages, and starter kits offer everything you need to build, deploy, and monitor web applications.

Get startedStart deploying

```
> composer global require laravel/installer
```

Trusted by thousands of companies around the world

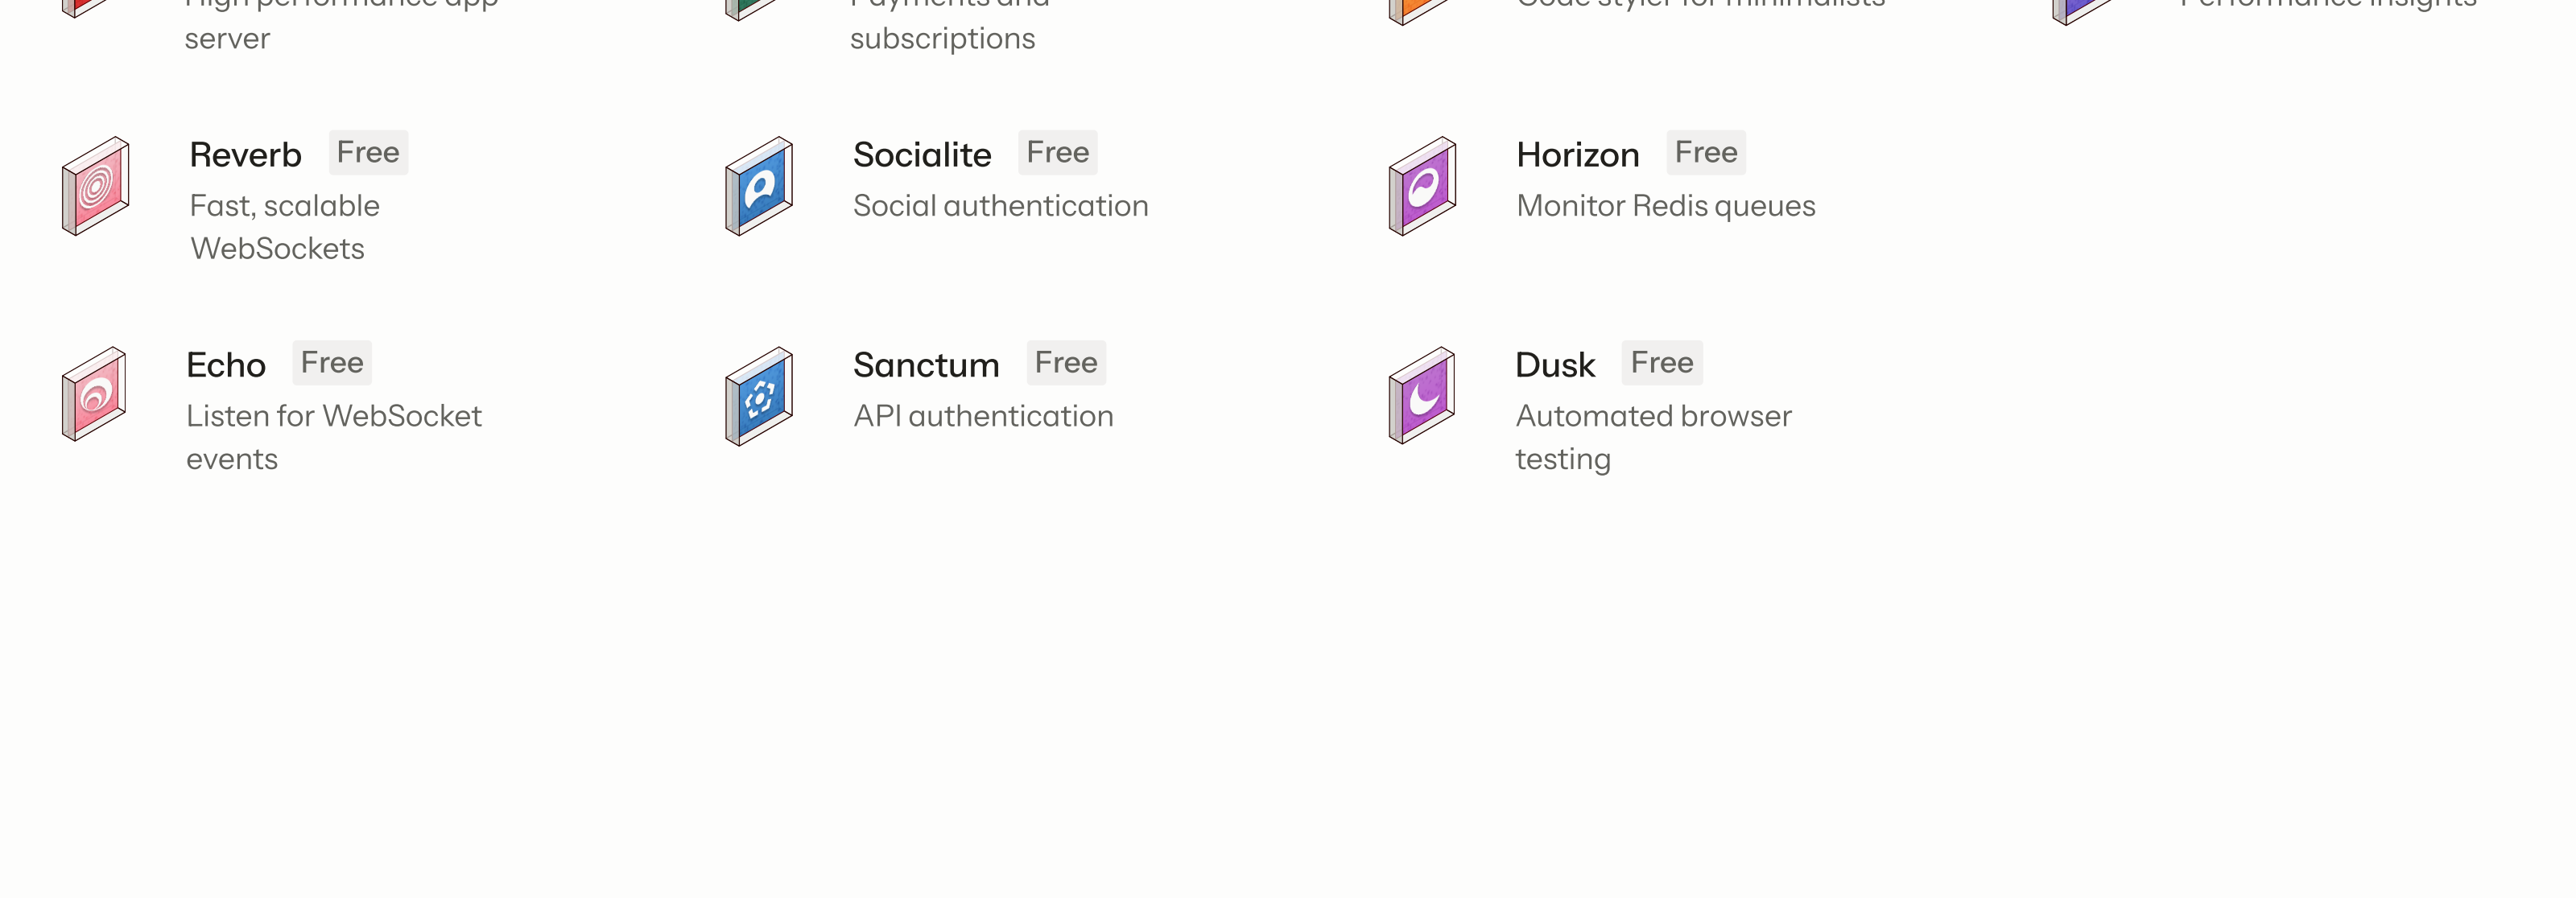

</> Ecosystem

## A PHP framework with a robust ecosystem

Out of the box, Laravel has elegant solutions for the common features needed by all modern web applications. Our first-party packages offer opinionated solutions for specific problems so you don't need to reinvent the wheel.

PackagesStarter KitsProducts

</> Backend

## Code that speaks for itself

Simple, elegant syntax powers amazing functionality. Every feature has been considered to create a thoughtful and cohesive development experience.

Authentication

Authorization

Eloquent ORM

Database migrations

Validation

Notification and mail

File storage

Job queues

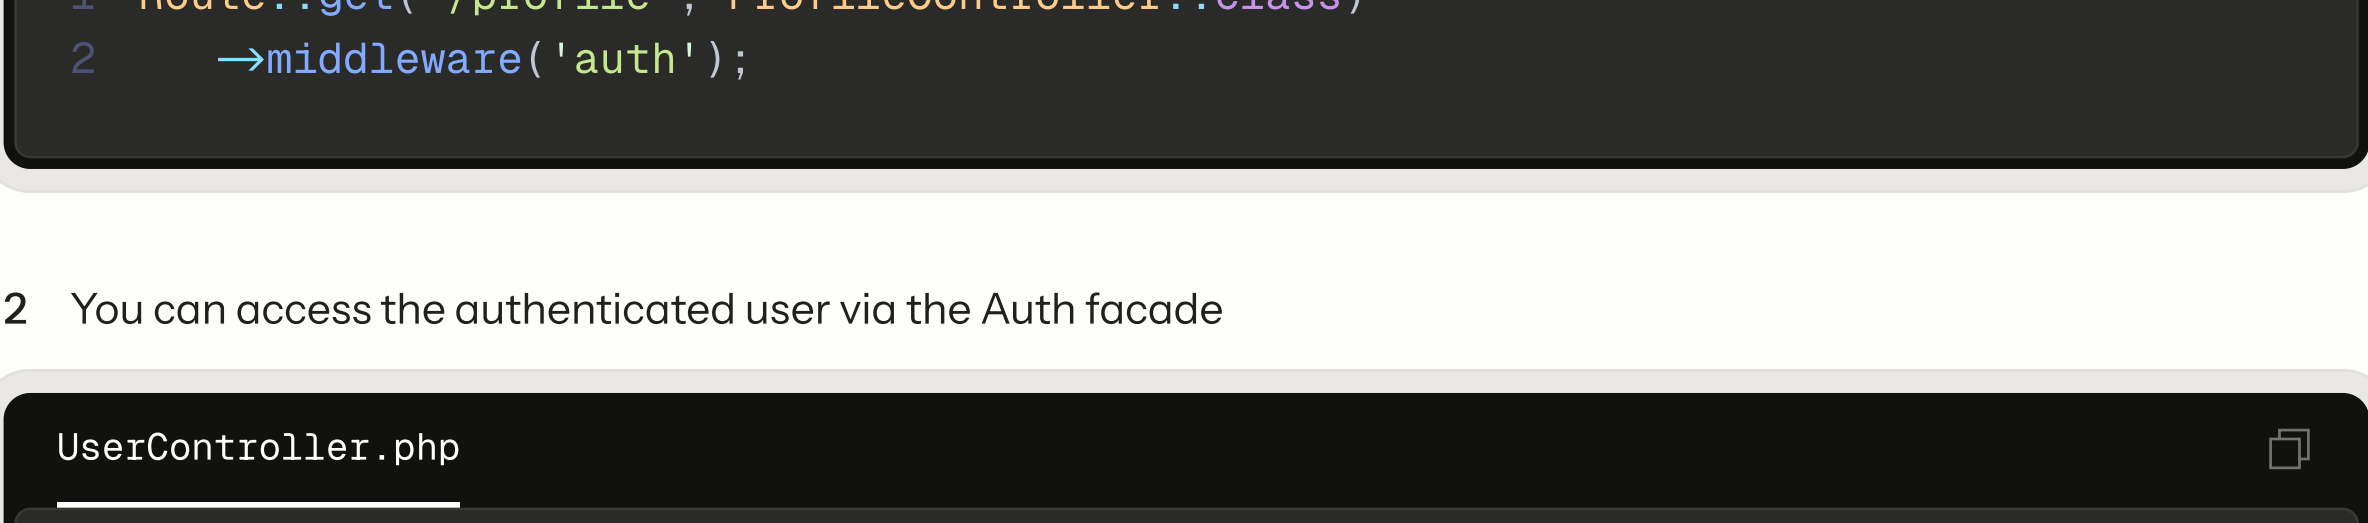

Task scheduling

Testing

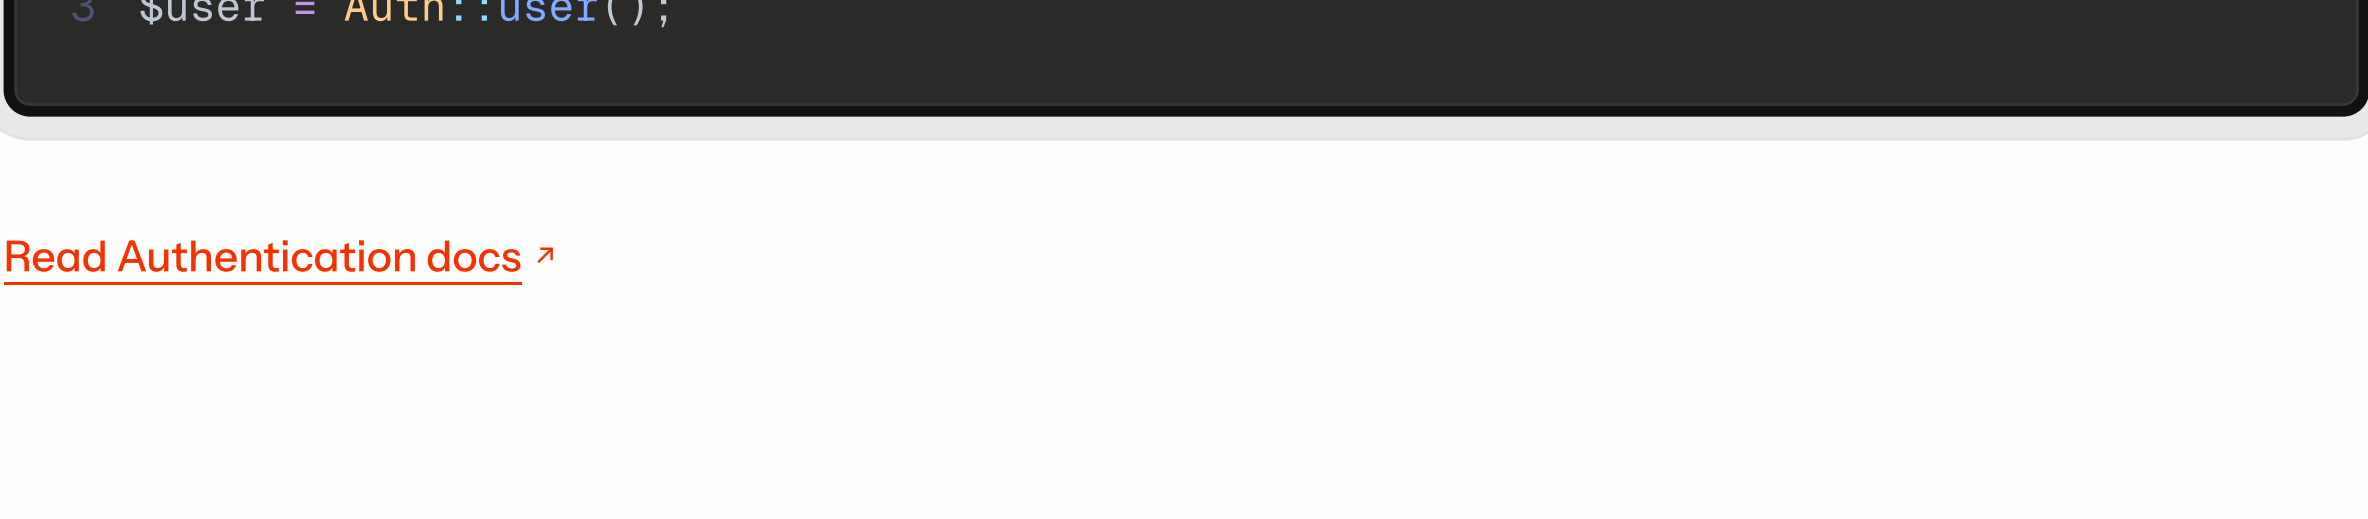

Events and WebSockets

Authentication

1 Add an authentication middleware to your Laravel route

2 You can access the authenticated user via the Auth facade

[Read Authentication docs >](#)

Frontend

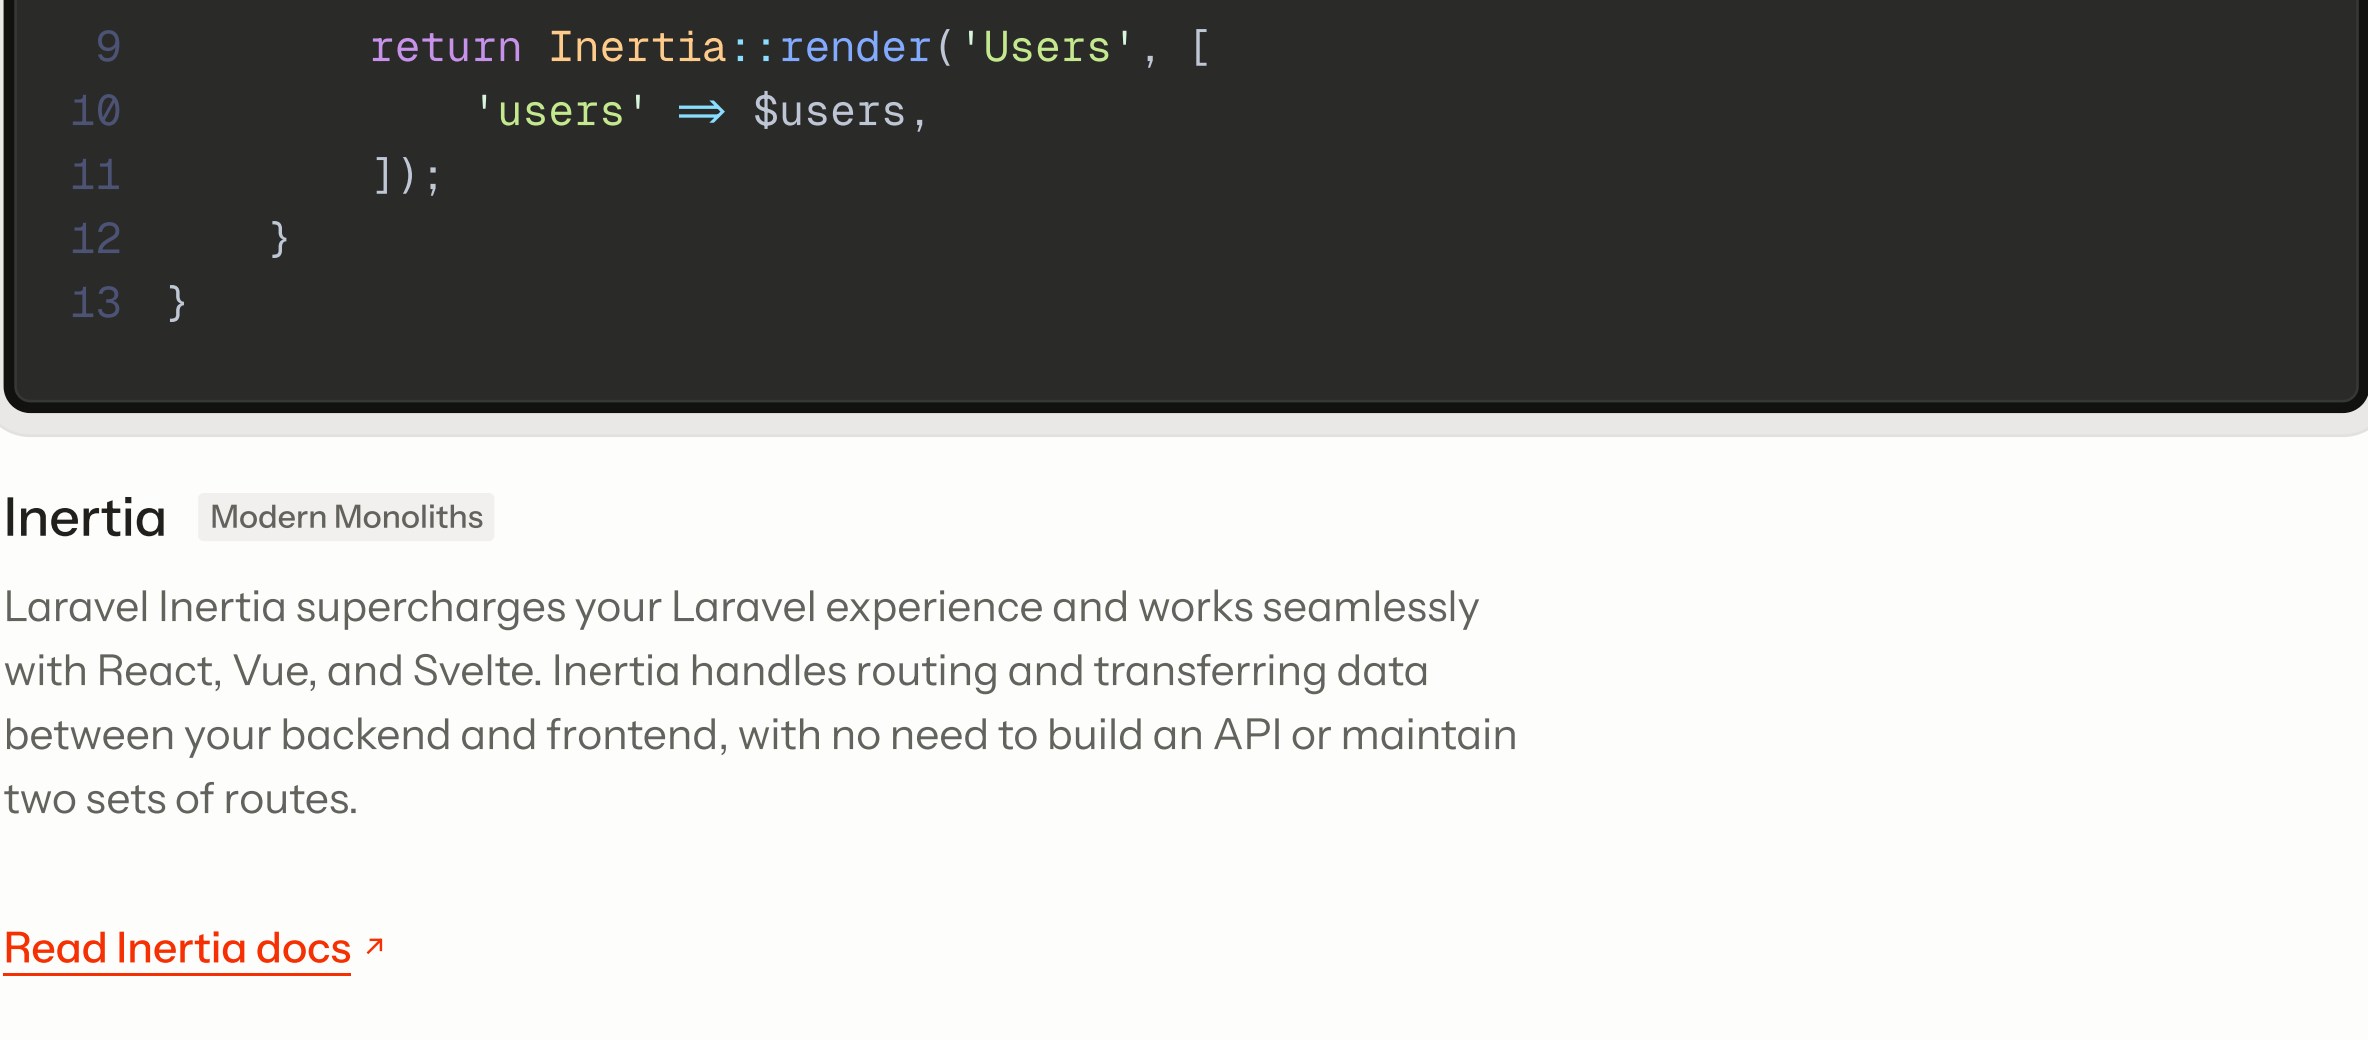

## Frontend for any stack

Whether you prefer a traditional PHP backend, a modern frontend using Laravel Livewire, or can't get enough React and Vue, Laravel allows you to deliver highly polished and maintainable applications in a fraction of the time.

Inertia

Livewire

SPA and Mobile Apps
